Solaiman Jawad

Erfurt, Germany — +49 151 29085194 — solaimanjawad@gmail.com

in/solaiman-jawad — github.com/msjawad

Skills

- **Areas:** Distributed systems, infra, networking & performance, LLMs, Machine Learning, AI
- **Languages:** TypeScript/JavaScript (Node.js), Python, Go, Java, C++, SQL
- **Tools:** AWS, Terraform, CDK, Docker, Kubernetes, MongoDB, Redis, gRPC, CI/CD

Education

University of Waterloo *Sept '17 – Sept '22*

Honours Bachelors of Computational Mathematics, Computing Technology Option

Work Experience

MyHiringSpace Remote

Founding Software Engineer *Oct '25 – Present*

- Built MyHiringSpace, an LLM-driven candidate retrieval platform that sources candidates, scores them against the role, surfaces contact details and tracks them through the hiring pipeline
- Owned the company's technical roadmap and platform architecture, translating business strategy into engineering priorities and taking the product from the ground up to paying customers
- Designed an evaluation framework for search quality, using it to cut LLM cost per search by **74%** and applying prompt optimization to offset keyword degradation and improve overall accuracy

Amazon Web Services British Columbia, Canada

Software Development Engineer (Network Load Balancing) *Jan '23 – Oct '24*

- Architected connectivity canaries to expose availability metrics and measure performance of the dataplane config propagation path, reducing new deployment blast radius by **13%**
- Developed capacity placement controls that let resource deallocation run concurrently and safely
- Built packet capture tooling on dataplane routing processes for live network traffic analysis

Software Development Engineer (API Gateway)

- Automated regional service build by creating chained workflows, migrating resources to CDK and replacing multiple disaster runbooks, cutting manual region build effort from **32 days to 4 hours**
- Implemented cache prewarming and exponential jitter on service fleet records, reducing peak transactions by **28%** and mitigating throttling during table rollover

Hivestack Ontario, Canada

Junior Software Developer (Campaigns team) *Sept – Dec '22*

- Moved ad campaign API runtime operations onto background workers via job queues
- Remodeled relationship between vendor & product structures, enabling grouping deals by location

Alida Ontario, Canada

Software Development Intern (Touchpoint Microsurveys) *Sept '21 – Apr '22*

- Built page templates that add actions to adverts dynamically, pushing user engagement up **6%**

Electro Source Inc Ontario, Canada

Software Developer (SR&ED Credit Tracker) *Jun – Aug '20*

- Built a work management program for SR&ED tax claimable projects, moved its infra to IaC and implemented host scaling and data retention policies, saving **$12,000**+ annually

Intelerad Medical Systems Ontario, Canada

Software Developer Intern (Machine Learning) *Sep – Dec '19*

- Automated chest X-ray hanging protocol by building neural networks to classify viewing angles

Projects

- **pathfinder** – Interface which generates mazes and visualizes different pathfinding algorithms
- **bigRSA** – Program that generates 300-digit primes to encrypt and decrypt messages using RSA
